Just announced -
AI project quality checks are now part of the Riipen experience!

Riipen, the world's leading work based learning platform is continuingly improving and iterating to bring our learners the most robust and easy to use platform for connecting and collaborating with real employers' projects to enhance student engagement, aid in skill development, and deliver improved employability results.

You spoke. We listened.

At Riipen, we believe in constantly improving our products based on user feedback to deliver features that meet their needs and enhance the Riipen experience for the educators, employers and learners we all serve. We have listened to your feedback and are excited to present our latest platform feature enhancement: **AI project quality checks**

AI project quality checks

Our journey began with a thorough understanding of the challenges faced by our employers in creating and posting their projects. We conducted extensive research, engaged in conversations with our customers, and analyzed user experiences to identify the pain points and opportunities for enhancing the Riipen experience and outcomes.

The why of this feature

Our goals for adding **AI Project Quality Checks** came from feedback and a desire to Improve overall project quality by identifying for employers how their project scores on learning opportunity, clarity and support offered.

User outcomes

Our employers were looking for ways to receive more tangible recommendations for how to approve their projects to match with course outcomes. The new feature also helps Riipen to flag projects that could be improved or removed from the marketplace. These enhancements will benefit all users with speed to matching and with more robust projects aligned to course outcomes for overall more impactful experiences.

Feedback that influenced the feature

"As an educator, I want employers to receive feedback on their projects and make improvements prior to seeing them in the marketplace."

"As an employer, I want to know if my project is aligned with best practices before I try to match with an educator."

How it works

Step 1

Create a project as an employer.

Behind the scenes, Riipen is checking their project by using AI to assess it against three main criteria:

- Relevance and learning opportunity
- Clarity of description
- Quality of mentorship and support

Step 2

Each category is then assessed from 1–5, to produce an average score for the project

Step 3

The user is sent an email letting them know the outcome of this review and why their project scored as it did in each category.

For scores below 3.5:

- In the email with the evaluation, the user is prompted to edit their project. The project remains open.

- A flag is created in Forest Admin for the Riipen CS team to review the project and decide whether to remove it from the marketplace.

For scores of 3.5 and up:

- In the email with the evaluation, the user is congratulated and told to go find a match. No flag is created.
