Riipen's latest platform enhancements.

Live walkthrough of Riipen's most recent features!

Achievements

Riipen recently released functionality for all users to earn in-platform achievements based on criteria defined by Riipen or their portal administrator.

These achievements can be issued as open digital badges through integrations for learners to share and post to their online portfolio.

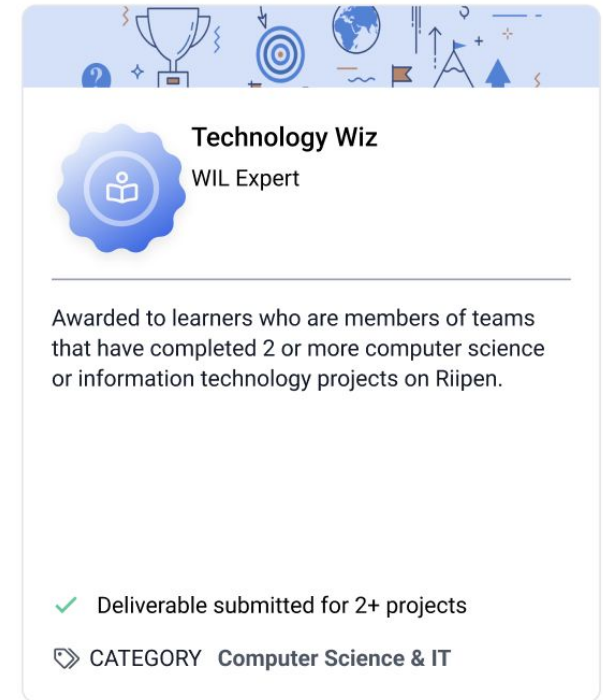

Business Strategy Wiz
WIL Expert

Awarded to learners who are members of teams that have completed 2 or more business strategy projects on Riipen.

✓ Deliverable submitted for 2+ projects

📁 CATEGORY **Business Strategy**

Technology Wiz
WIL Expert

Awarded to learners who are members of teams that have completed 2 or more computer science or information technology projects on Riipen.

✓ Deliverable submitted for 2+ projects

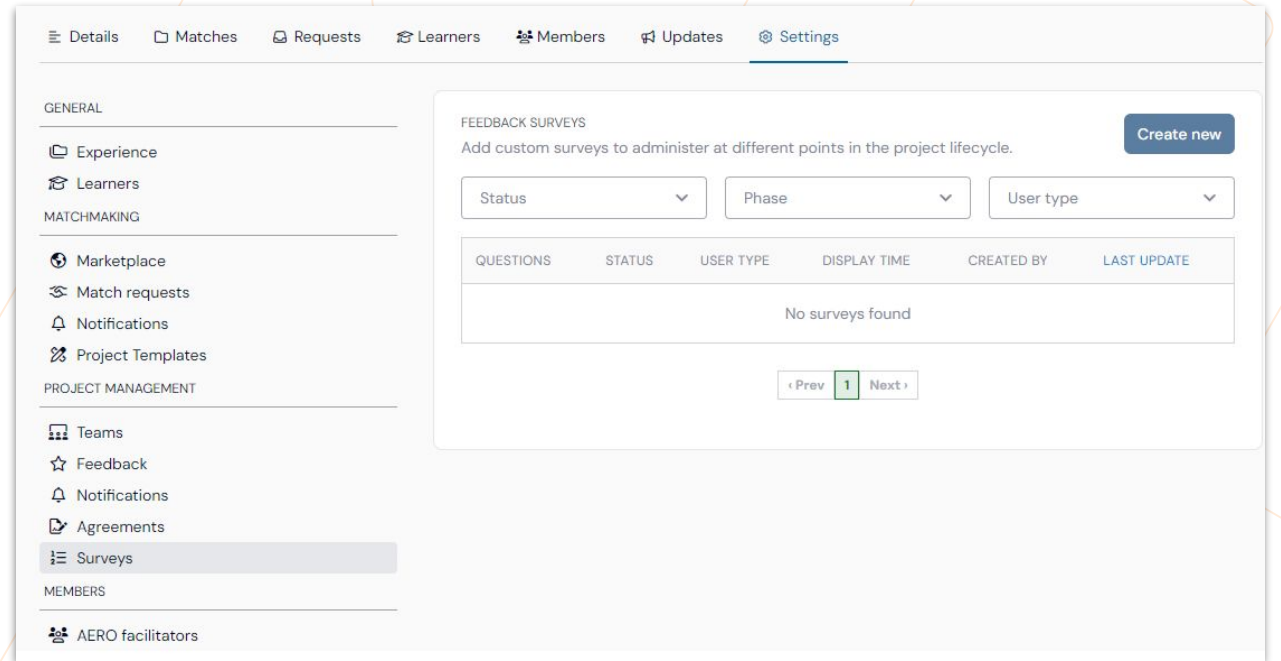

📁 CATEGORY **Computer Science & IT**

Custom surveys

Educators can create custom surveys for learners and employers working on their experience.

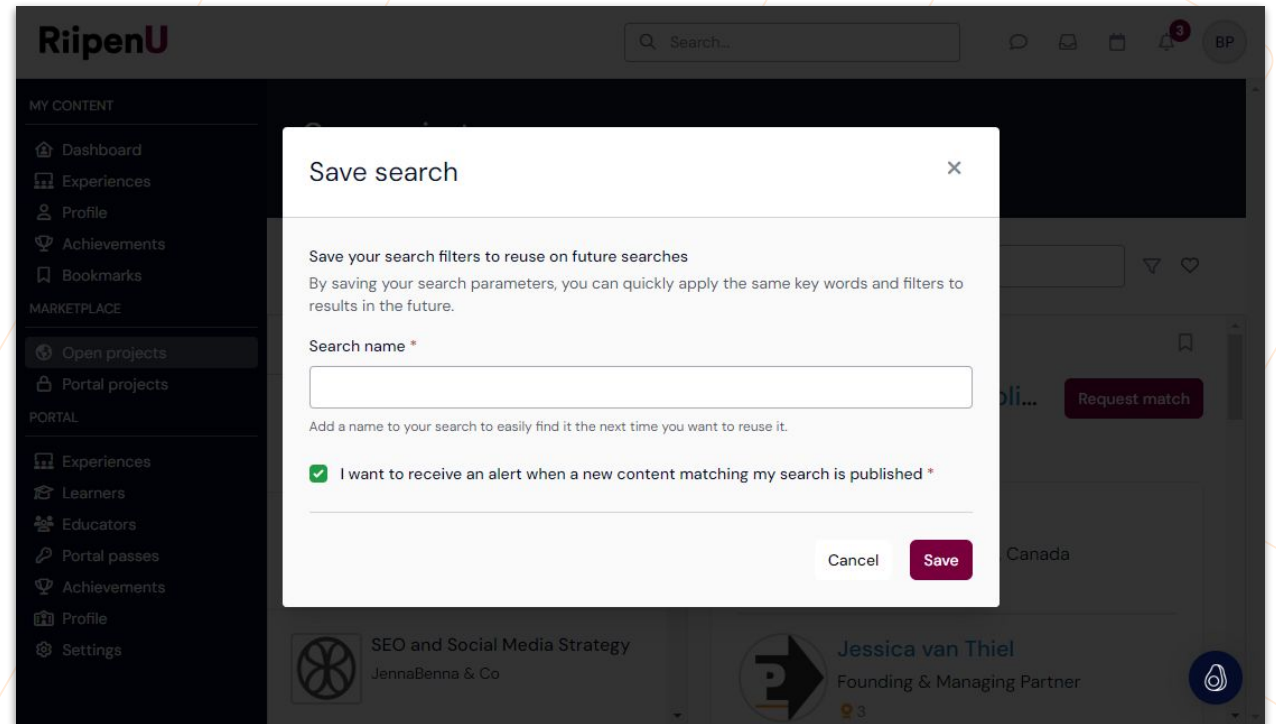

Portal administrators can create custom surveys that will be administered on all experiences within their portal.

These custom surveys may be administered at different points in the project lifecycle.

Saved searches

Without needing to manually enter all of the search conditions each time, this latest feature on the Riipen platform benefits both educators and employers by allowing for more rapid application of search criteria within the marketplace and a speedier experience + project match.

AI project creation & review

All employers have the option to harness the power of AI for project creation.

This new feature allows employers to generate a project in alignment with best practices from a 1-2 sentence prompt.

Create a project with AI

Our trained artificial intelligence will generate a full project description you including details, deliverables, and more.

Here are some examples of what you can provide to the AI to make sure you get the perfect project generated for you:

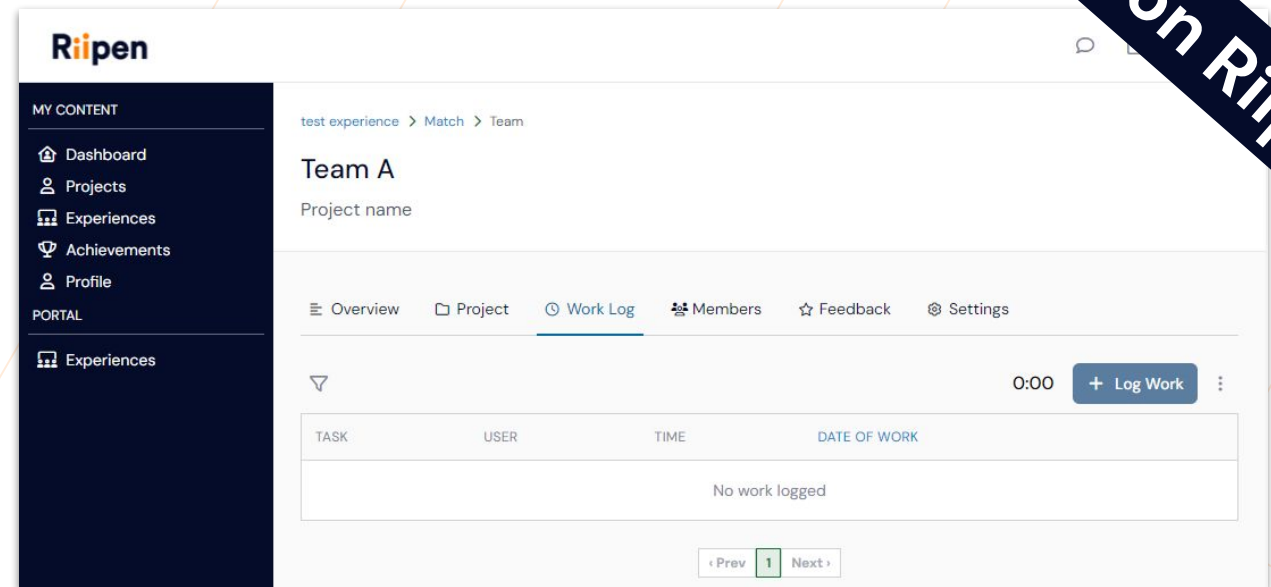

1. Build a competitive landscape for my company and provide an analysis of the competitors.
2. Create a social media campaign strategy for my company.
3. Create a market expansion report for our company and products.
4. Conduct user testing on our company's new product and provide an analysis on the results.
5. Review and audit our privacy policy against industry standards and best practices.

What is the main objective of your project? *

Time tracking

Using Riipen's worklog feature, learners can log time spent on tasks for each project they are working on.

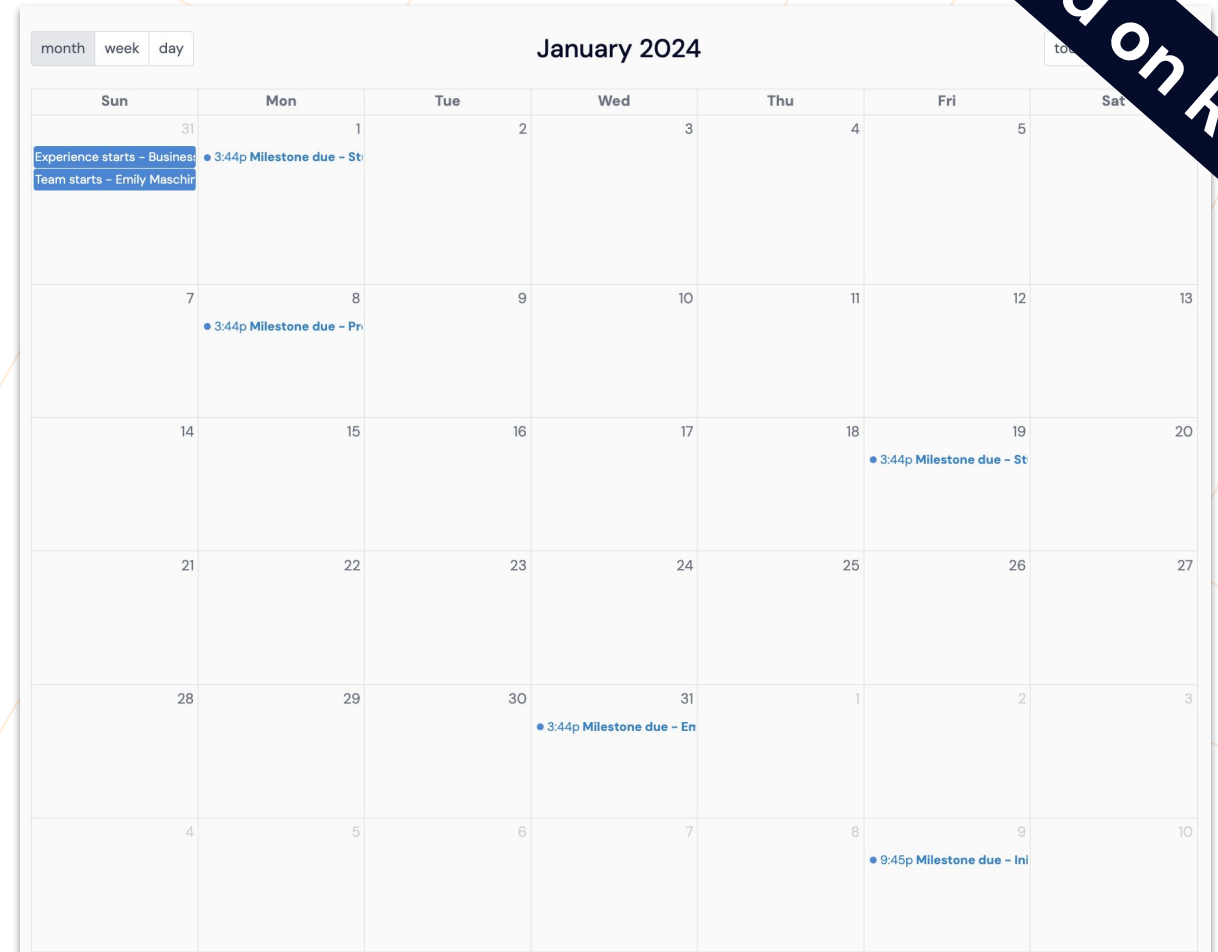

This allows educators and employers to track what the learners have been working on and how many hours have been completed so far.

Also released on Riipen

Calendar integrations

The built-in calendar allows users to track key dates on deadlines in a single view. Users can add the live calendar link to an external calendar (Google, Outlook or other) to keep dates from Riipen synchronized with their calendars.
